

ACCESS TO LABOUR MARKET INFORMATION

Outcome indicator

Indicator Phrasing

English: number of VET institutions that have updated labour market information

French: nombre d'établissements d'EFV qui ont mis à jour l'information sur le marché du travail

Portuguese: número de instituições de FEV que atualizaram as informações do mercado de trabalho

Czech: počet poskytovatelů odborného vzdělávání, kteří mají aktuální informace o trhu práce

What is its purpose?

This indicator measures the number of VET institutions with the access to updated labour market information that enables them to ensure the relevance of their vocational courses to the labour market's needs.

How to Collect and Analyse the Required Data

Determine the indicator's value by using the following methodology:

1) **Interview a VET institution representative** about the availability of labour market information. You should focus on whether they have relevant and recent (up to 3 years old) data on:

- > employment of their graduates from tracer studies;
- > current skill gaps faced by private sector/ employers;
- > labour market needs monitoring data conducted by local authorities

2) To **calculate the indicator**, include all VET institutions that have access to all 3 above-mentioned sources of information (these criteria can be adjusted if required and well justified).

Important Comments

1) The indicator **does not measure the extent to which labour market information is being utilised** by the VET institutions. Such measurement requires a separate indicator.
