

WASH SERVICES IN FACILITIES

Impact indicator, Outcome indicator, ECHO indicator

Indicator Phrasing

English: % of users considering basic WASH services to be functional in the target facilities

French: % d'utilisateurs considérant que les services EHA de base sont fonctionnels dans les installations ciblées

Spanish: % de usuarios que consideran que los servicios básicos de WASH son funcionales en las instalaciones objetivo

Portuguese: % de utilizadores tendo em consideração os serviços de água higiene e saneamento (WASH) básicos funcionais nas infraestruturas-alvo

Czech: % uživatelů uvádějících, že základní WASH zařízení v cílových zařízeních jsou funkční

What is its purpose?

This indicator measures the proportion of the target facilities' users (such as health centres' patients or schools' students) that consider the facilities' basic WASH services to be functional (in terms of its quality, quantity and access).

How to Collect and Analyse the Required Data

Collect the following data by conducting individual interviews with a [representative sample](#) of the target facilities' users which are at the time of the survey present in the facilities:

Q1: *In your experience, does [specify the facility's name] have sufficient access to water for drinking and ensuring basic hygiene?*

A1: yes / no / does not know

Q2: *In your experience, does [specify the facility's name] have a sufficient number of clean and safe toilets, for both women and men?*

A2: yes / no / does not know

Q3: *In your experience, does [specify the facility's name] have sufficient facilities for ensuring basic hygiene, such as hand washing?*

A3: yes / no / does not know

To calculate the indicator's value, divide the number of respondents who replied “yes” to all three questions by the total number of respondents (exclude those whose answer was “does not know”). Multiply the result by 100 to convert it to a percentage.

Disaggregate by

[Disaggregate](#) the data by gender.

Important Comments

1) **Users are the direct beneficiaries** of the facilities' services (such as patients or students), not the facilities' staff who bear most of the responsibilities for maintaining WASH services.

2) Always **adjust the questions to the context** you operate in and the type of facilities you target.

3) The indicator is one of **ECHO's Key Outcome Indicators** (KOI) and follows the methodology proposed by ECHO (see attached below). If you do not use this indicator for an ECHO-funded project and do not have the resources to conduct a representative survey, you might 1) change this indicator to “% of target facilities with functional WASH services”; 2) make a list of what exactly is meant by “functional WASH services”; and 3) assess it based on observations, key informant interviews and focus group discussions with users (i.e. not by using relatively time-consuming interviews with a [representative sample](#) of users).
