SUCCESSFULLY PILOTED SOCIAL PROTECTION INNOVATIONS

Outcome indicator

Indicator Phrasing

English: number of successfully piloted social protection innovations in the past [specify the number] months

French: nombre d'innovations de protection sociale expérimentées avec succès dans les [précisez le nombre] mois passés

Spanish: número de innovaciones de protección social probadas con éxito en los últimos [especifique el número] meses

Portuguese: número de inovações de protecção social pilotadas com sucesso nos passados [especifique o número] meses

Czech: počet úspěšně vyzkoušených inovací v oblasti sociální ochrany během posledních [určete počet] měsíců

What is its purpose?

The indicator measures the number of implemented social protection innovations (new services, approaches, etc.) which passed the pre-defined criteria of a "successful piloting".

How to Collect and Analyse the Required Data

Calculate the indicator's value by using the following methodology:

1) **Pre-define the criteria** of a "successful piloting". This can include, for example:

  > the pilot was able to provide clear evidence of its benefits, especially when compared to the existing services or approaches

  > the pilot can be scaled up in a cost-efficient way

  > scaling up the pilot does not face any major opposition from the main stakeholders in the given (sub)sector

  > the pilot provided clear lessons learned and recommendations for its scale up

2) **Assess whether the pre-defined criteria were met** by reviewing relevant documentation and conducting interviews with the concerned personnel.

3) **Calculate the number** of implemented pilots which meet the pre-defined criteria.

Important Comments

1) Proving the benefits of the given pilot might require you to conduct a **survey involving a control group**, enabling you to assess the actual benefits brought by the new service or approach.
