SHELTERS WITH HAZARD MITIGATION MEASURES

Output indicator, Cluster indicator

Indicator Phrasing

English: number or % of (re)constructed shelters incorporating hazard mitigation measures

French: nombre ou % d'abris (re)construits incorporant des mesures visant à réduire les risques

Portuguese: número ou % de abrigos (re)construídos que incorporam medidas para a mitigação de riscos

Czech: počet nebo % postavených / opravených přístřeší využívajících hazardu-odolná opatření

What is its purpose?

The indicator measures the extent to which the supported shelter solutions incorporate specific measures designed to mitigate the impact of hazards experienced in the area of intervention, such as storms or earthquakes.

How to Collect and Analyse the Required Data

1) Define what types of hazard mitigation measures were supported.

2) Use a review of secondary documents (e.g. project reports, photos), interviews with key informants (project staff, construction companies) and observations to assess a) the total number of supported shelter solutions; and b) the number of solutions incorporating the supported types of hazard mitigation measures.

Disaggregate by

Disaggregate the data according to the types of supported hazard mitigation measures.

Important Comments

1) **Consult the Shelter Cluster** regarding the recommended types of hazard mitigation measures.
