

## AWARENESS OF FACILITIES WITH HIV TESTING

Output indicator

---

### Indicator Phrasing

**English:** % of women aged 15 – 49 years aware of a place where they can get an HIV test

**French:** % de femmes âgées de 15 à 49 ans qui connaissent un endroit où elles peuvent effectuer un test VIH

**Portuguese:** % de mulheres com idades entre os 15 e os 49 anos que têm conhecimento de um local onde podem fazer o teste do VIH

**Czech:** % žen ve věku 15 – 49 let se znalostí místa kde mohou absolvovat HIV test

### What is its purpose?

The indicator measures the proportion of women aware of where they can get an HIV test – an essential pre-condition for receiving effective treatment (if required) and preventing mother-to-child HIV transmission.

### How to Collect and Analyse the Required Data

Collect the following data by conducting individual interviews with a [representative sample](#) of women aged 15 – 49 years:

#### RECOMMENDED SURVEY QUESTIONS (Q) AND POSSIBLE ANSWERS (A)

**Q1:** *Do you know of any place where you can get an HIV test?*

**A1:** yes / no

(ask only if the previous answer is YES)

**Q2:** *Where exactly is that place?*

**A2:** the respondent knows a specific place / the respondent does NOT know a specific place

To **calculate the indicator's value**, divide the number of respondents who know a specific place by

the total number of interviewed respondents. Multiply the result by 100 to convert it to a percentage.

## Disaggregate by

Disaggregate the data by the respondent's location and age.

## Important Comments

1) Always verify whether the respondent really **knows a specific place** and does not just say, for example, (somewhere) "in a district town" or (somewhere) "in a hospital", without knowing a concrete place.
