## PREGNANT WOMEN WHO SLEPT UNDER AN INSECTICIDE-TREATED BED NET

Outcome indicator, Output indicator

## **Indicator Phrasing**

**English:** % of pregnant women who spent the previous night in the interviewed households and slept under an insecticide-treated bed net

**French:** % de femmes enceintes ayant passé la nuit précédente dans les foyers interrogés et ayant dormi sous une moustiquaire traitée

**Portuguese:** % de mulheres grávidas que passaram a noite anterior nos agregados familiares entrevistados e dormiram debaixo de uma rede-mosquiteira tratada com inseticida

**Czech:** % těhotných žen, které strávily předešlou noc v domácnosti respondenta a spaly pod moskytiérou ošetřenou insekticidem

## What is its purpose?

Malaria infection during pregnancy can lead to miscarriage, premature delivery, low birth weight, congenital infection, and/or perinatal death. Therefore, this indicator measures the proportion of pregnant women who spent the previous night in the interviewed households and slept under an insecticide-treated bed net.

## How to Collect and Analyse the Required Data

Collect the following data by conducting individual interviews with a <u>representative sample</u> of pregnant women:

#### **RECOMMENDED SURVEY QUESTIONS (Q) AND POSSIBLE ANSWERS (A)**

**Q1**: Are you currently pregnant?

A1: yes / no / did not respond

(ask the following question only if the previous answer is YES)

**Q2**: During the last night, did you sleep in this household?

A2: yes / no

(ask the following questions only if the previous answer is YES)

**Q3**: During the last night, did you sleep under a mosquito net?

A3: yes / no

(ask the following questions only if the previous answer is YES)

**Q4**: Can I please see the mosquito net you slept under?

A4: mosquito net was available / mosquito net was not available / refused to show a mosquito net

**Q5** for enumerator: What type of mosquito net did the woman sleep under?

#### **A5**:

1) insecticide-treated net [fill in the locally available types and brands]

- 2) another type of net
- 3) not possible to determine the type of net

To **calculate the indicator's value**, divide the number of pregnant women who slept under an insecticide-treated net by the total number of pregnant women surveyed (exclude all respondents who did not respond; who refused to show a mosquito net; or it was not possible to determine whether their net is insecticide-treated). Multiply the result by 100 to convert it to a percentage.

## Disaggregate by

Disaggregate the data by the respondent's location and wealth category.

#### Important Comments

1) Ensure that the **enumerators are very familiar** with the locally distributed / sold types of mosquito nets, so that they can recognize them easily. Consider providing them with pictures of various types of nets.

## E-Questionnaire
