

MAINTENANCE OF SANITATION FACILITIES

Output indicator

Indicator Phrasing

English: % of households who keep their sanitation facilities clean

French: % de ménages qui maintiennent leurs installations d'assainissement propres

Portuguese: % de agregados familiares que preservam as suas instalações sanitárias limpas

Czech: % domácností, které udržují své toalety čisté

What is its purpose?

The indicator assesses the proportion of households who keep their latrines clean - an essential precondition for their use and for ensuring effective vector control.

How to Collect and Analyse the Required Data

Collect the following data by using observations of latrines owned by a [representative number](#) of the target group members:

RECOMMENDED SURVEY QUESTION (Q) AND POSSIBLE ANSWERS (A)

Q1 for data collector: *Is the household's latrine clean? (no faeces, urine, etc. present)*

A1: yes / no

Calculate the indicator's value by dividing the number of households who keep their latrines clean by the total number of observed latrines and multiplying the result by 100.

Important Comments

1) In the case of **communal sanitation facilities**, the indicator can be changed to "*% of communal sanitation facilities that are kept clean*". This can be determined based on interviews with randomly selected users, key informant interviews and observations.
